SUMMARY

Linux Infrastructure Professional with 2+ years of experience administering, monitoring, and securing enterprise-scale Linux server environments (RHEL, SLES, Ubuntu). Proficient in executing routine system audits, configuring proactive alerting, and troubleshooting complex service bottlenecks across hybrid physical and virtual infrastructures. Skilled in automating operational tasks using Bash and Ansible, and experienced in container deployment and lifecycle management with Docker.

TECHNICAL SKILLS

- Linux Administration:** RHEL 7/8/9, SLES, Ubuntu Server, systemd, journalctl, LVM, YUM/DNF, SELinux, auditd, cron/crontab, SSH hardening, sudoers policy, user/group management.
- Containerization:** Docker (container deployment, image management, troubleshooting, and run-time optimization).
- Observability & Monitoring:** Splunk (log queries, alerting), Netdata, Dynatrace. *Note: Experienced with enterprise monitoring platforms (Dynatrace, Splunk, Netdata); quick to adapt to Nagios given strong foundational monitoring/alerting background.*
- Configuration & Automation:** Ansible Playbooks, Terraform (Server lifecycle automation).
- Infrastructure & Virtualization:** VMware ESXi (VM provisioning, console support, snapshots), Hyper-V (exposure), physical server hardware status monitoring, Windows Server (AUM patching, basic administration).
- ITSM & Collaboration:** ServiceNow (Incident, Problem, Change Management, CMDB), ITIL v4, SLA management, Root Cause Analysis (RCA), Bash scripting, Python (intermediate), Git version control, Jenkins.

PROFESSIONAL EXPERIENCE

Accenture

Associate – Infrastructure & Cloud Operations

June 2024 – Present *India*

- Monitored system performance and resource metrics across 400+ production server environments; maintained alerting setups to proactively isolate and resolve potential service disruptions.
 - Deployed and managed Docker container environments for internal testing; validated image configurations, mapped persistent storage volumes, and optimized container resource constraints.
- Monitored hardware health parameters (CPU, thermal thresholds, and disk array status) of on-premises physical server hosts alongside virtual infrastructure, coordinating hardware alert resolutions.
- Analyzed system logs and metrics using Splunk and Dynatrace to isolate disk I/O bottlenecks, memory leaks, and network interface anomalies during incident triage.
- Resolved production infrastructure incidents end-to-end; performed detailed Root Cause Analysis (RCA) and documented remediation workflows in ServiceNow.
- Developed Bash and Python scripts to automate system health checks, log rotations, and account security audits across RHEL environments.
- Executed scheduled patch deployments for 150–200 Linux servers using YUM/DNF and Azure Update Manager; completed pre-patch validation and rollback testing.
- Configured OS baselines, system procs, and systemd services during server provisioning, applying standard security hardening guidelines (SSH, SELinux, sudoers).

- Supported VMware ESXi operations including VM provisioning, console access troubleshooting, and snapshot management under change-controlled windows.
- Collaborated with network and security teams on DNS record changes, DHCP scope updates, and firewall rule validation for approved infrastructure changes.
- Authored and maintained Standard Operating Procedures (SOPs) and knowledge articles for server provisioning, decommissioning, patching, and emergency recovery tasks.

INFRASTRUCTURE PROJECTS

- Infrastructure Observability Home Lab (Netdata + RHEL):** Configured a self-hosted Netdata monitoring instance on an RHEL VM to track CPU, memory, disk, and network interfaces in real time. Built custom health check scripts and threshold alerting configurations to test system re-sponse and automate alerting behavior.
- Dockerized Nginx Reverse Proxy Lab:** Deployed a containerized Nginx environment using Docker and docker-compose to configure SSL termination, reverse proxy routing, upstream load balancing, and container lifecycle troubleshooting.
- Linux Server Hardening Automation Suite (Bash/Python):** Created a repository of Bash and Python automation scripts designed to enforce security baselines on target VMs. Automated shadow le auditing, cron job compliance validation, and log rotation settings utilizing Git for tracking and version history.

EDUCATION & CERTIFICATIONS

- Master of Computer Applications (MCA)** | Adikavi Nannaya University | **74%**
- Bachelor of Computer Applications (BCA)** | Adikavi Nannaya University | **78%**
- Certifications & Upcoming Scheduled Exams:**
 - **Red Hat Certified System Administrator (RHCSA / EX200)** — Scheduled Exam: **July 27, 2026**
 - Microsoft Certified: Azure Administrator Associate (AZ-104)
 - Microsoft Certified: Azure AI Engineer Associate (AI-102)
 - ITIL v4 Foundation (IT Service Management)
